

**SALT RIVER ELEMENTARY SCHOOL
FLUORIDE VARNISH AND SEALANT PERMISSION**

Dear parent /Guardian,

SRE School is privileged to offer dental fluoride varnish and sealants on molars to students here on the SRES campus. Our provider for fluoride and sealants is **Health and Human Services and the Salt River Dental Clinic/ PIMC.**

Your student needs to have a health chart at the Salt River Health Clinic and this signed SRES permission slip on file at school in order for to receive these services.

The American Dental Association recommends using fluoride products and sealants for children to prevent tooth decay. Fluoride has been used to harden teeth against decay for over 40 years. Fluoride varnish is a quick way to prevent tooth decay as well as to stop small cavities from growing larger. Dental Sealants are a plastic coating that is painted on the crown (top) of molars. Sealants can be applied as new molars come in. The teeth need to be decay free when sealants are applied.

Please indicate your response to the questions below, sign the form, and return it to Salt River School Health office.

Is your child allergic to anything? Yes No If yes what _____

Is your child being treated by a doctor for anything? Yes No If yes
